

THE GREENS ON:

CLIMATE CHANGE

THE GREENS VISION FOR NSW IS LOW CARBON AND JOBS RICH

By rapidly phasing out coal and fossil gas-fuelled electricity generation and creating large-scale investment in renewable energy, NSW can reap the environmental, social and economic benefits of being at the helm of the green energy economy.

LET'S MAKE NSW 100% RENEWABLE

The Greens' plan to transition NSW to 100% renewable energy would help position our state as a world leader in clean technology and climate action. It is possible, affordable and essential.

Our plan to make it happen by 2030:

- ▲ Phase out all fossil fuel power stations by 2030 by increasing public investment in renewable energy technologies such as solar thermal power
- ▲ Remove barriers preventing the development and expansion of renewable energy technologies
- ▲ Facilitate public and private investment in renewable energy
- ▲ Reform the energy market to make it ready for renewables

The Government's current 2030 climate target falls devastatingly short of what is recommended by the Climate Change Authority and the United Nations Framework Convention on Climate Change.

The Greens plan for real climate action through a 60-80% reduction on 2000 emissions levels by 2030 would pave the way for NSW as a clean energy powerhouse, creating many environmental, social and economic benefits.
